Well suited for shooting moving subjects. Faster shutter speeds allow you to catch an instantaneous image of a moving subject, while slower speeds create a flowing effect and allow you to shoot without a flash in dark areas. When you set the aperture value, the camera automatically selects a shutter speed to match the brightness. Selecting a lower aperture value opening the aperture allows you to blur the background and create a beautiful portrait. The overlapping seams of several adjacent images can be joined into a single panoramic image. Canon PowerShot SX10 IS featuring a powerful 20x 28560mm optical zoom lens allows you to shoot any scene from wideangle to telephoto. The Optical Image Stabilizer ensures that you get steady, crisp sharp images in low light or zoomed in. The 10 MP CCD sensor combines with the DIGIC 4 Image Processor delivers stunning images for highquality printing extending creative cropping options. Other highlights include 2.5inch variangle LCD display, full manual control, Face Detection, iContrast Intelligent Contrast Correction and MovieSnap mode lets you capture highresolution still images while shooting a movie. The SX10 offers some significant upgrades over its predecessor, the S5 in addition to a huge jump in lens range, from 12x to 20x, it also bumps up a couple megapixels to 10 from 8. The latest generation of Canon imaging processors, Digic 4, adds tweaks to face detection, Servo AF, Face Detection SelfTimer, and Intelligent Contrast Correction. Its a little heavier, 1.5 pounds, which makes it feel like a dSLR, but the big grip gives you plenty of holding room. While it offers the same set of manual, semimanual, and automatic controls, theyre differently designed and laid out. Gone is the multifunction power switch, leaving a plain old button in its wake. Now you have a more traditional button to jump into review mode; it sits near the indented thumb rest on the back, joined by the exposure compensation and focus area selection buttons. Unfortunately, the labels, light blue on gray, are pretty difficult to see in dim light and can be obscured by the glare off the iridescent plastic in bright. Canon uses this control layout for some of its recent compact pointandshoots, and in many ways its a vast improvement over the S5s configuration. But while I generally like the controls, the dial feels too mushy. It doesnt respond appropriately, and it feels like it needs to spin too far or not as far for any given operation. As a result, for example, I frequently overshoot desired shutter speeds. Perhaps it just takes more getting used to than I had time for, but it really feels like it needs better tactile feedback.

The zoom switch didnt feel terribly exact either. While thats a typical problem with stepped zooms these lenses dont really cover a continuous zoom range, instead stopping at a series of preset distances, the SX10s felt even less accurate than usual, likely because of the wide range it has to cover. I expect to see this problem even more as we test this years 24x and 26x lenses. Unfortunately, the electronic viewfinder isnt particularly great. It updates slowly and looks pretty coarse. More annoyingly, the camera lacks a dedicated toggle between the LCD and EVF. Instead, you have to cycle through the four different display settings lowinfo LCD, detailed LCD, lowinfo EVF, detailed EVF. That makes it nearly impossible to quickly jump back and forth; I frequently ended up cycling past my target. In contrast, the dedicated movie record button hits the right note of efficiency. As does the mode dial, which, unlike most cameras, rotates a full 360 degrees instead of forcing you to reverse direction to get to the modes at the other end. A small but welcome change. Some of the more novel features include a Face Selftimer, which shoots a specified number of seconds after a face is detected and a custom timer which lets you also specify the number of shots to take sort of a limited intervalometer since you can only take up to 10 shots. New to this camera is Canons Servo AF, the companys AF tracking mode. With this camera, since the continuous shooting is so slow, I find that the Servo AF has too much time to get confused, and since EVFs black out when a shots taken you cant verify that its focusing on the right thing; I have lots of infocus fences and out of focus people in my test shots. And lest you suggest I should have used the Face Detect AF, that doesnt work unless youre shooting faces looking at you, not moving crowd shots. These include PASM, full auto and a handful of scene modes; my favorites are a custom setting slot on the mode dial and 3.9inch macro and zero!

inch Super Macro modes. It supports 30fps VGA movie capture. On the upside, the camera retains the separated stereo mics from the S5 and can zoom pretty quietly during recording. But while the video quality is fine, if a little soft, 720p HD would be nicer. Need more details about the standard feature set. Check out the PDF manual. Lets round up its best gems. Featuring an incredible 20x optical zoom lens, optical image stabilization, UD glass, and high ISO capability, the SX10 offers many of the features of Canons legendary EOS SLRs in a compact, easy to use package. Boasting an impressive 10.0 Megapixel DIGIC 4 sensor, the SX10 renders breathtaking photographs with amazing color accuracy, incredible detail, and superb sharpness even in large scale prints. Advanced Noise Reduction technology, innovative Face Detection, and video recording further expand the possibilities of your photography. The SX10 is ready to help you capture your vision. Powerful Imaging Performance By combining a 10.0 megapixel CCD sensor and Canons advanced DIGIC 4 Image Processor, the PowerShot SX20 IS offers amazing image quality with dramatic low light sensitivity. Impressive ISO 1600 capability reduces blur and subject movement for crisp photos with spectacular sharpness and clarity. 20x Optical Zoom Lens Built to the highest standards, Canon optics bring rich color and uncompromising quality to every subject. The 20x optical zoom range 28-560mm 35mm film equivalent of the SX10 takes you where the action is. The screen offers 270 degree tilt and 180 degree flip for easy shooting at any angle. Framing and reviewing your photos is a pleasure, even under the brightest sunlight.

Multiple Shooting Modes With 24 Shooting Modes including 11 Special Scene Modes, youre ready for whatever shot comes your way. When youre taking pictures, the only thing you want to think about is your subject. With the PowerShot SX10 IS, you can count on exact focus no matter where your subject is in the frame. Youve got Shooting Modes including Special Scene Modes that give you breathtaking, exhilarating pictures even when shooting conditions are tough. Optical Image Stabilization Canons optical image stabilizer counteracts camera shake caused by unwanted movement. Vibration sensors detect the angle and speed of hand movement and send this information to the processor, allowing the camera to compensate. This adds stability to handheld, telephoto and moving shots and enables shooting at shutter speeds of up to three stops without the use of a tripod. Advanced Face Detection Technology Canons Advanced Face Detection Technology keeps every face in focus. The latest in focus tracking technology coupled with Intelligent Contrast Correction, and Redeye Correction deliver consistent sharpness and natural, lifelike skin tones. Intuitive Manual Controls If youve ever wanted the control of an SLR with all of the convenience of a point and shoot camera, look no further. The SX10s control placement shares the logic of Canons popular EOS SLR family. From Aperture and Shutter Priority to full on Manual control, the SX10 is the perfect camera to help you capture your creative vision. AA size Battery Convenience This AA battery powered camera enables you to easily power up. Since AA size batteries can be purchased at virtually any store, simply get replacements wherever you go no special power adapters or chargers are needed.
