The PowerShot SD780 IS Digital ELPH captivates the senses with bold saturated colors and a daringly original design that matches the intensity of Canon's most innovative camera technology. Even when picture taking conditions seem pretty unforgiving, you've got Canon on your side. So the shots you used to miss are the images you'll now be sharing, and the movies you never took before will be HD unforgettable. PowerShot SD780 IS Highlights 12.1 megapixel resolution, 3x optical zoom lens with Optical Image Stabilizer Canon's commitment to innovation defines the excitement of the PowerShot SD780 IS Digital ELPH. 12.1 megapixel resolution is more than a number, it's your cutting edge link to the outstanding clarity and quality you've always wanted in your images. Think bold and big, because razor sharp oversized prints are a breeze. Get the picture It's absolutely brilliant. The PowerShot SD780 IS Digital ELPH has a 3x optical zoom lens that makes it easy to get the inspiring, emotive closeups that will make your images lasting keepsakes. This magnificent lens gives you the power to shoot distant subjects with razor sharp precision and stunning lifelike color. So you can brilliantly capture a closer shot of a landscape, or a child's big smile. The PowerShot SD780 IS Digital ELPH is equipped with Canon's acclaimed Optical Image Stabilizer Technology that automatically detects and corrects camera shake one of the leading causes of fuzzy or blurred shots. Even when zoomed in, you can get the steady, crisp, brilliant images you'll be proud to shoot and share. And Canon's Optical Image Stabilizer Technology is so convenient to use. It functions perfectly with or without a flash.

HD movie shooting capability plus HDMI output The PowerShot SD780 IS Digital ELPH lets you record video in beautiful high definition 1280 x 720 pixels. The camera also makes it easy to enjoy HD movies and still photos on your HDTV with a miniHDMI connector for direct connection to a high definition monitor. You'll enjoy the HD experience with no degradation of image or audio in the signal, plus the ability to display up to 130 still images at once. Smart AUTO intelligently selects the proper settings Just set the Canon PowerShot SD780 IS Digital ELPH to Smart AUTO and you're ready for maximum enjoyment from your picture taking every time. It's a relaxing and satisfying way to shoot because you can completely concentrate on your subject knowing that the camera has the technical details covered. Advanced Canon technology intelligently analyzes your situation and shooting conditions. Then it automatically selects an appropriate setting from 18 specially defined settings. So whether you're photographing flowers, a captivating sunset, or your friends at the park, you can be confident that you're getting dramatic, memorable images. Shooting Modes Advanced presets for the best possible photos under certain conditions. With 20 Shooting Modes, you're ready for whatever shot comes your way. 2.5 inch PureColor LCD II and wide viewing angle The PowerShot SD780 IS Digital ELPH gives you a large 2.5 inch LCD screen for excellent control when framing your shots. Canon's PureColor LCD II offers spectacular color, resolution and contrast even when viewed at an angle. The screen is highly durable and easy to see in any light with a scratch resistant,

antireflective coating. It also features Night Display for easy viewing in low light a perfect feature for gathering friends and family around to see your images.

A World of Advantages with Canon's Technology The DIGIC 4 image processor has evolved Face Detection Technology that tracks the faces of moving subjects and lets the shooter enter the frame seamlessly with the Face Detection SelfTimer. DIGIC 4 Image Processor Canon's most advanced image processor, DIGIC 4, delivers evolved Face Detection Technology that keeps every face in every photo looking its very best. The technology finds and tracks the faces of moving subjects until you're ready to shoot, then delivers perfect focus. In addition, exposure, flash and white balance are compensated, so that faces exhibit natural skin tones and backgrounds are properly exposed. Using an internal database of thousands of different photos, iSAPS works with the advanced DIGIC 4 Image Processor to improve focus speed and accuracy, as well as exposure and white balance. A Face Detection SelfTimer automatically detects an increase in the number of faces and makes the appropriate adjustments. For instance, to include the photographer's face in a group shot, there's no need to rush in. Just put the camera on a stand or tripod, specify Face Detection SelfTimer, and the camera will wait for the photographer's face to get on camera before it takes the shot. Motion Detection tracks moving subjects in a much larger range, and the Servo AF retains focus on a moving subject after the shutter button is pressed halfway allowing you to wait for the perfect shot without refocusing. Intelligent Contrast Correction DIGIC 4 also makes possible the iContrast Intelligent Contrast Correction system, which controls the compensation level in pixel units to brighten dark areas while leaving bright areas unchanged for better images where the main subject is dark, and more natural transition. The PowerShot SD780 IS Digital ELPH can even use iContrast in playback mode to adjust images that were shot without the setting activated.

Redeye Correction provides three options for removing redeye from subjects in flash pictures. 1 Redeye Correction during shooting actually identifies and corrects redeye in human subjects as pictures are taken. 2 The PowerShot SD780 IS Digital ELPH can be set to automatically detect and correct redeye during image playback. 3 You can manually locate any red eyes in a scene during image playback on the LCD screen, and command the camera to remove them. Life doesn't give you second chances to capture special times. That's why the PowerShot SD780 IS Digital ELPH features an ISO 1600 setting that reduces the effects of camera shake and sharpens subjects in lowlight situations, giving you greater shooting flexibility. ISO can be expanded to 3200 when you select ISO 3200 Special Scene mode. Mohamad Aref 5.0 out of 5 stars I use an old phone pouch or case that has a belt clip on it and it fits right in there with an extra battery with no issues see pictures bellow It does take amazing pictures in sunlight and it is more of a point and shoot operation type of camera, no knowledge of photography is needed. The only downside to this camera is the night shots, it is not the best performer in low light situations, shots tend to get grainy a bit, other than that, it is a great camera to have and I highly recommend it to my fellow Amazon shoppers, go for it and you'll never regret it. High Definition video is very good at 720p.

This will not replace a full size camera or the 5D Mark II for video quality. But, it is a lot better than most including the original Flip video camera. An HDMI cable IS NOT INCLUDED with the camera. You will need it to watch HD video directly from the camera on an HDTV. I bought a 3 ft miniHDMI to HDMI cable online from Monoprice for 8 bucks including USPS first class shipping. They have quality cables for the lowest price on the Monoprice site. UPDATE I am very happy with

the miniHDMI to HDMI cables. They were so inexpensive that I bought 2 of these at 3ft long one for the iMac, the other is for my travel bag. I bought a 6ft miniHDMI to HDMI cable for the HDTV in the first floor family room. You have to get up often to start the next movie clip. UPDATE The small cover that protects the miniHDMI and USB ports feels a little flimsy. The hinge stretches. I have to force it slightly beyond my comfort to insert cables. I can see this covering breaking off with a lot of use. An SD storage card IS NOT INCLUDED. They are available at low cost, under 15 bucks, on the net. Check the Dealnews site for the latest sales. I used a 4GB SD high capacity SDHC card which will hold about 30mins of video. Some complain 2.5inch is too small for the LCD. There is no place to put a larger 3inch LCD on this camera without making it a touch screen like the iPhone or increasing the camera size. Plus, 2.5 inch is common on a lot of cameras. I have no problems with it. TINY VIEW FINDER It was hard peering through the small hole. I mainly use the LCD screen about 95% of the time. They all worked great. I was surprised by the small size since I only saw this camera online and never tried it out at a store. It is slightly smaller than my average size business card and about as thin as a new deck of playing cards. Im female, but, I never bought an ELPHsize Canon camera because they seemed too small.

I was concerned I would not be able to comfortably operate the buttons or it would slip out of my hands. I dont have that fear with the SD780. The brushed metal finish provides some friction. The buttons are placed well. Also, the wrist strap is always available as protection against dropping the camera. SMART AUTO feature is great. I use it often to take closeup macro shots or when I dont have time to adjust the settings. I hold the camera about 4 inches from an object and the camera self adjusts the settings. It amazing to watch it work. I partially press the shutter button to see where the camera is focused and move it to focus on my area of interest. The camera selects of the preprogrammed 18 modes to find the one that creates the best image. As many stated, the images are superb thanks to the 12.1 mega pixel resolution, Digic 4, and the image stabilizer IS function. You should not live without IS unless you are into the artsy blurry pictures. It takes great pictures of kids who dont sit still. Great if you dont have steady hands. Images are crisp, clear and can be easily seen in the beautiful 2.5inch LCD. I noticed the noise in some of the photos. Did not have too much problems with it. The 3X optical is fine. Zooming during filming would be better. Hopefully, Canon adds this feature to future powershot ELPH models. Overall, a great camera that is thin enough to hide in a small purse or pocket yet still deliver superb photos for its size! I have owned 7 Canon cameras including 5 digital cameras. I have used this camera for about 1 week. Now, that was the case when I purchased this little toy. I had a Nikon D40 dSLR one of the big cameras, and I was looking for something smaller that I could carry around everywhere. Particularly, I needed something to take on my trip to Japan. I spent days reading reviews and testing products at stores, and finally decided on this camera.

I narrowed down my choices to Canon cameras, because although I love Nikon cameras and dSLRs, I think that when it comes down to pointandshoot cameras small, easy to use cameras Canon cameras are simply the best. Ive never been disappointed by one of these. Among 10 different Canon models it was difficult to choose, but what finally made me decide on this one was the size and ability to record HD video. I watched on YouTube some of the sample videos which you can find just by typing the camera model and the HD was amazing, even in such a small camera. The resolution is great, and the picture quality simply great. 12MP of image resolution means more to love and more flexibility to crop when editing it also means you should get an SD card with a couple of GBs I got the camera with an 8GB card and I can take thousands of pictures at maximum resolution, or record over 45 minutes of video in one clip if I want to do so. This cameras pictures rival my Nikon dSLR pictures, and the flexibility the camera gives you in manual mode is great. I mostly use it in automatic modes, and it works perfect. If you are looking for a photographer camera, then Id still go for a Nikon D40 or something similar, since you can shoot in RAW format which is very valuable for heavy editing. One more note, the camera feels great in my hands and its very easy to use. I was

quite familiar with the Canon menus, so it might have been easier for me to use it, but I'm sure you can learn fast how to master this camera. Ask any questions you may have. The comparison tables in this article list equivalent IXY Digital and PowerShot Digital ELPH model names. The cameras themselves are identical apart from the front fascia, according to the parts lists. The Canon model number on the bottom is consistent between marketing names. Images are recorded as JPEGs.

Raw image files are not accessible without the use of third party firmware such as CHDK. Canon issued a recall in October 2006 adding these to their recall list. The damaged CCD displays purple or blueish, distorted or possibly no image at all. This problem can be temporarily overcome by removing both the main battery as well as the small internal battery. Canon has acknowledged this issue and formerly repaired free of charge. The reason given is its missing info about the video recording specifications and the PowerShot Digital ELPH 360 HS a successor to 340 HS model, which was also released in January 5th 2016, alongside 190 IS model. It has a 20.2 MP CMOS sensor with 12x optical zoom and 1080p FullHD video capabilities as opposed to ELPH 190IS model.
